## Hard Board

Hardboard is a type of fibreboard, which is an engineered wood product. It is similar to particle board and medium-density fibreboard, but is denser and much stronger and harder because it is made out of exploded wood fibres that have been highly compressed. Unlike particle board, it will not split or crack.

Products: Hard Board  
Standard Size: 1220mm x 2440mm  
Thickness: 2.00 to 4.00mm  
Utilization: Furniture; Building
