Low Iron Glass

Low Iron Glass is a kind of plate glass with highly clear, highly transmissive, highly smooth. And it is a new type of deeply processed glass, also it is a new type advanced structural glass with environment protection. The glass is a lower iron float glass and be made by a special process. It is not like the clear float glass to sight like green, it looks just like colorless crystal, highly transmissive and terrific.

Features:

- Excellent clarity ensures true colors are seen and optimum vision quality is achieved when looking through the glass.
- Offers a high level of light transmittance
- Creates maximum light inside rooms due to the products high level of transparency.
- Particularly beneficial for thicker laminated products, affording a high level of transparency.
- The edges of the glass remain white, unlike other glass making it ideal for use in furniture.

Application:

- Display cabinets
- Shelves
- Glass furniture
- Table tops, bars and desk tops
- Shower screens
- Solar energy industries
