Voltage Stabilizer

Voltage Stabilizer is also called Automatic Voltage Stabilizer or AC Voltage Stabilizer or Voltage Regulator.

Actually an automatic voltage stabilizer is designed to automatically maintain a constant voltage level, with protections of equipment against voltage surges, over voltage, under voltage, smoothing impulsive noise.

It regulates the fluctuating input power voltage and output constant voltage, such as 220V or 230V for single phase and 380V or 400V for three phase. The fluctuating range in different countries differs a lot. For most African countries, the voltage fluctuates widely from 100V to 270V, or even lower than 90V. So, if your countries suffer unstable voltage, you must equip voltage stabilizers for your appliances or a big AVR for your whole house. The voltage stabilizer is always a Safe Guard for protecting residential use and the industrial use, where the electricity is unstable.

Currently supplying the below brands...

Nigeria: • NEXUS	Ghana: • KAPS
• EUROSONIG	
• NATURE POWER	
• MEGA	Tanzania: • BELTRON
• I POWER	
• MORE GOLD	
• GEEVOX	Kenya: • KINGCAND
• KAYSUN	
• M STAR	

500VA	4560
1000VA	2760
1500VA	2760
2000VA	2760
2000VA BIG	2168
3000VA	790 (w/master Ctn)
5000VA	790 (w/master Ctn)
